1. Overview

Classic Avatar is a local, offline outfit workbench for classic MapleStory avatars. Browse equipment, preview the character instantly, save outfits, and export images or GIF animations.

Everything is read from a local MapleStory Data folder. The app does not connect to the internet and never uploads anything.

2. Requirements

Windows 10 / 11 (64-bit).

Recommended resolution: 1440 × 900 or higher. The main window is fixed at 1310 × 830.

The lite package does not include the .NET runtime. Install .NET 10 Desktop Runtime first:

1. Open https://dotnet.microsoft.com/download/dotnet/10.0
2. Under ".NET Desktop Runtime", choose Windows x64 and download the installer.
3. Run the installer, then double-click ClassicAvatar.exe.

If .NET 10 Desktop Runtime is already installed, skip these steps.

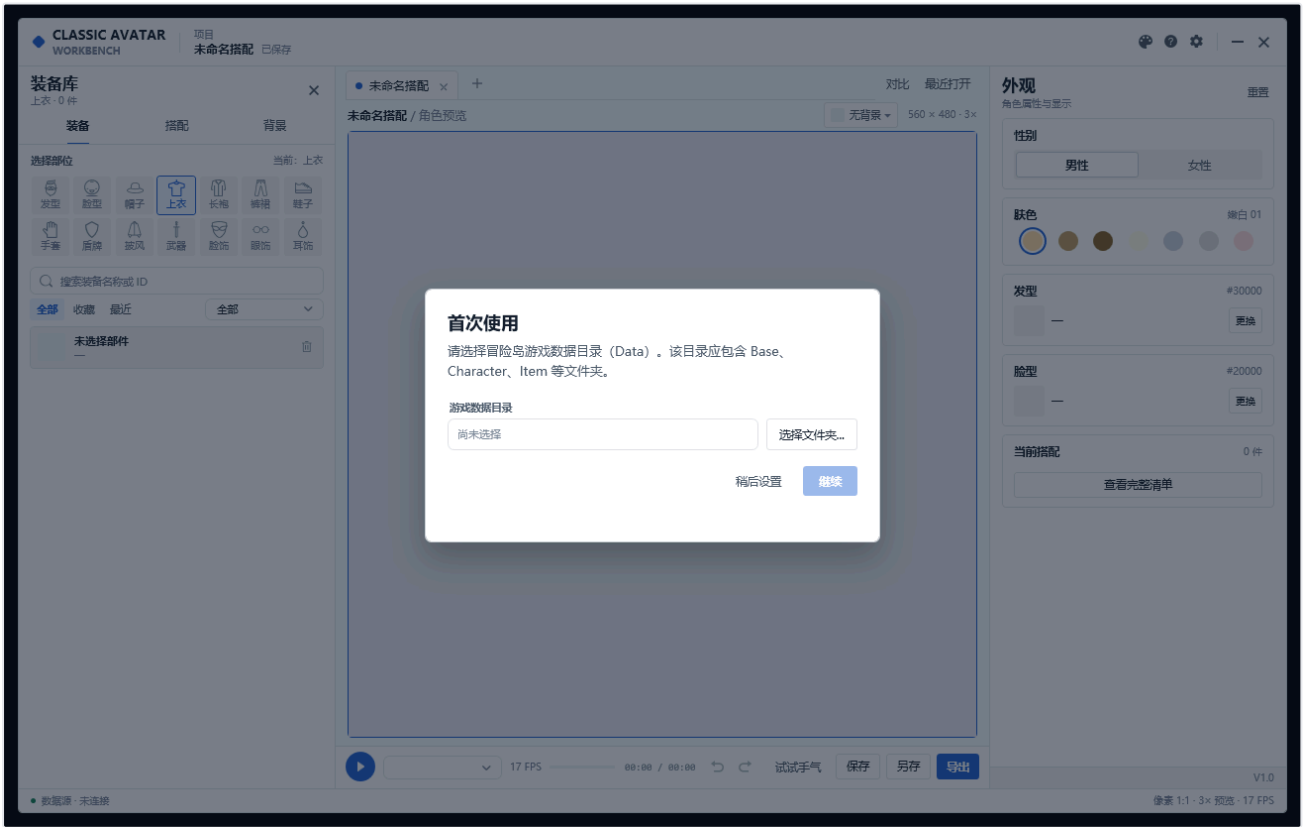

3. First launch and data folder

On first launch a First launch window opens automatically. Click Choose folder..., select the Data folder containing Base, Character, and Item, then click Continue.

You can also click the gear icon later and choose the Data folder again in Settings.

The folder is remembered and reopened automatically. You can change it in Settings at any time.

If the folder is invalid, a VDialog message appears and the previous data is kept.

Choosing the Data folder on first launch

4. Interface

Header: palette, help, settings, minimize, close.

Left: Equipment / Outfits / Background tabs, part selector, search, and All / Favorites / Recent filters.

Center: live character preview, Compare, recent documents, background selector, preview size; the bottom bar has play, action, FPS, random outfit, Save, Save As, and Export.

Right: gender, skin, hair, face, and the five-slot current-outfit summary. View full list opens all 14 slots.

Main window: library on the left, preview in the center, appearance on the right

5. Browsing equipment

The 14 slots are arranged in two rows. Cards have a fixed width and show four per row.

Single-click tries an item; double-click equips it. Right-click copies the ID/name or adds a favorite; in Favorites the menu removes the favorite.

Search by name or ID. All / Favorites / Recent switch the list source; Normal / Cash filtering is hidden for hair and face.

Gender filter: male shows male + unisex, female shows female + unisex. Changing gender reloads the list.

Use the delete button next to the equipped item to clear a slot.

Switching slots releases the previous slot's icons and WZ package to keep memory low.

6. Saving and naming

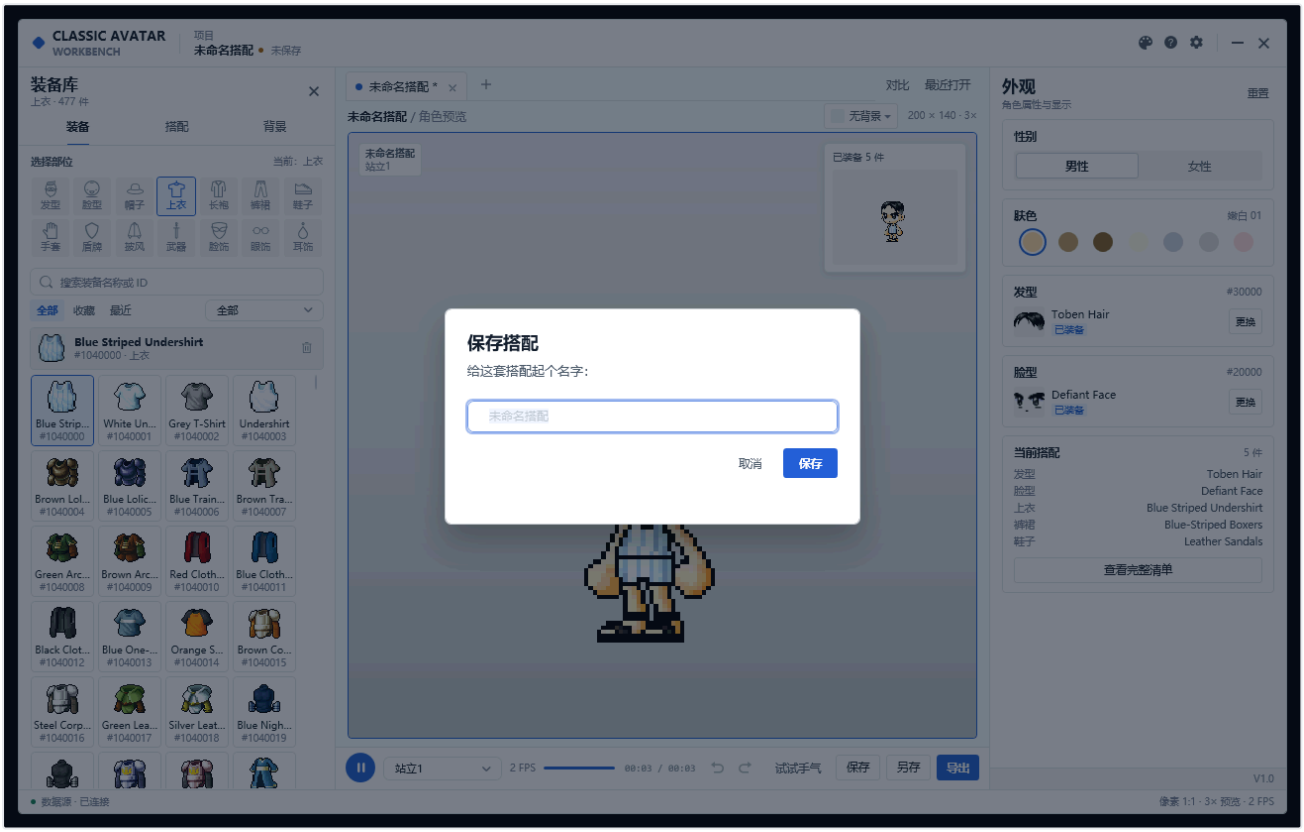

Click Save or press Ctrl+S to open a VDialog name prompt. Enter the outfit name and confirm.

Press F2 to rename the current tab. The tab is marked unsaved; use Save to write the new name.

Empty names are rejected. If a file with the same name exists, confirm before overwriting.

There is no auto-save. Closing a dirty tab or the main window shows a confirmation.

The save folder is configured in Settings; Save As uses the system file dialog.

Naming an outfit when saving

7. Export

The Export menu provides PNG (current frame), GIF (current action), TXT (equipment list), and Save As (.avatar outfit file).

PNG is suitable for showcase images; GIF exports the current action frame by frame; TXT includes slot, name, ID, and skin information.

8. Backgrounds

Put PNG / JPG files into the Backgrounds folder next to ClassicAvatar.exe.

Click Background at the top-right of the stage to select an image; click No background to return to the solid color.

9. Themes and language

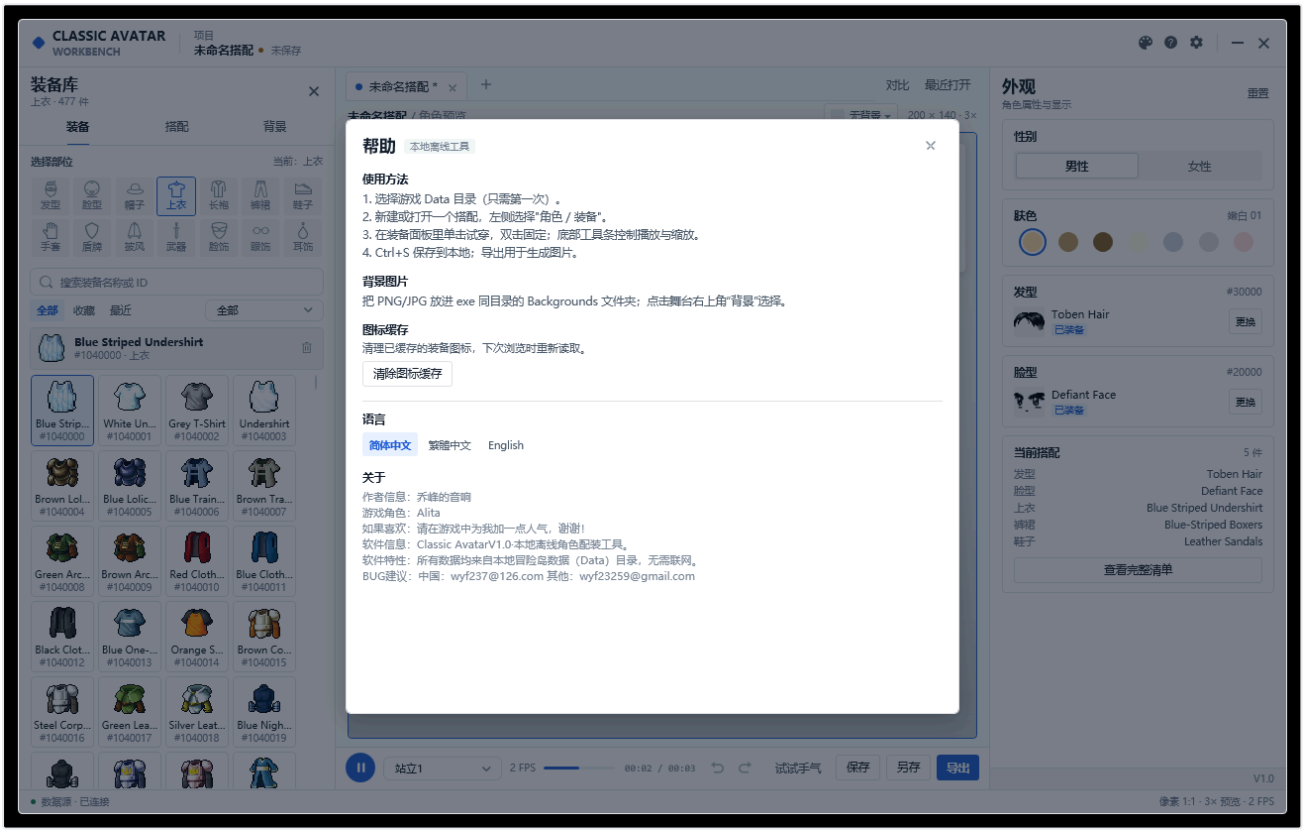

The app includes 22 colorways; click the palette icon in the header to switch, and the choice is remembered.

Switch between Simplified Chinese, Traditional Chinese, and English in Settings or Help; changes apply immediately and are saved.

10. Help and About

The Help window contains usage, background images, icon cache, language, and About.

About shows V1.0, author information, character, and bug-report emails.

Help and About

11. Troubleshooting

No equipment after opening data: make sure you selected the Data folder containing Base, Character, and Item, not the game root.

Some icons are blank: the item icon data may be damaged. Click Clear icon cache in Settings or Help, then browse again.

Memory use: the app automatically releases the previous slot's WZ package and image caches when the list becomes idle. Manual action is usually unnecessary.

Save failed: check write permissions and free space in the save folder, or choose another folder.

Crash: the log is at %LOCALAPPDATA%\ClassicAvatar\crash.log; include it in a bug report.

Window does not fit: the main window is fixed at 1310 × 830. Use 1440 × 900 or higher and avoid excessive display scaling.
